Warehouse Packing Stations

With a wealth of experience in the design, manufacture, and installation of high quality workstations and equipment, Spaceguard is your ideal UK based manufacturing partner.

We are able to work with you to develop packing stations, trolleys, and other warehouse equipment that is designed to suit your specific requirements. All of the equipment is produced in and delivered directly from our Hull based factory.

Our highly experienced engineers are able to provide solutions to save on processing time whilst being robust and also aesthetically pleasing.

We can also offer a white-label service, and we regularly design and manufacture equipment for a wide range of re-sellers and solutions providers.

To see further examples of packing stations and project case studies please visit our website or contact our helpful sales team with some details about your requirements.

Warehouse Packing Stations

Spaceguard manufactures packing stations to suit any type of product packing.

Each of the packing stations we provide are made using fully welded frames for strength and durability, which are powder coated in your choice of colour.

Every packing table is made to your specification, this allows you to choose a design and a number of accessories to suit your individual packing process.

Using in built process aids and ergonomic design not only vastly improves the speed of packing, it also helps to keep your packers fit and healthy.

To help prevent work related strains and injuries, we also supply additional accessories such as workstation lighting, anti-fatigue mats, height-adjustable workstations, conveyors, trolleys, lifting aids, and bench mounted packaging cutters,

**Please send us your

Packing Station Features & Accessories

Built in Weighing Scales

Built in Scales help to improve the packing work flow and ensure packages are the correct weight for shipping.

We can supply a range of scale types to suit your requirements.

Packaging Storage

Packing material storage helps to keep the packing station tidy and orderly.

We manufacture box dividers and roll holders that can be free standing or built into the packing station.

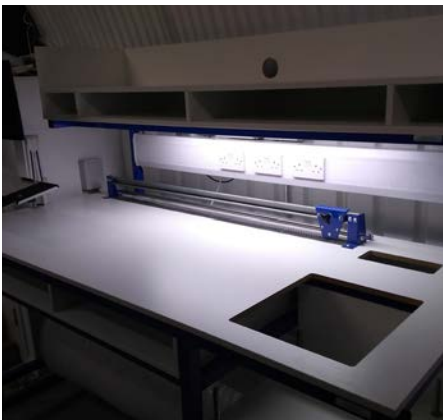

Pull Out Shelves

Pull out shelves are ideal for creating additional storage.

These can be used for box assembly, or to hold printers, computers, and other equipment.

Pull out bins are also available.

Packaging Cutters

Packaging cutters vastly improve the speed of the packing process and are much safer for cutting packing materials than using a knife or scissors.

We can supply these free-standing or built into the packing bench worktop.

Andon Signal Lights

Andon Signal Lights are an efficient way of signalling the live status of the packing station, so employees can call for assistance or alert team leaders of potential issues.

We can supply these free-standing or integrated within the packing station.

Power & Data Sockets

Power & Data Sockets are essential in many packing environments.

We build packing stations with sockets for both power & data, as well as other socket types including RCD sockets and European sockets.

Warehouse Trolleys

Our in house design team use CAD to create drawings and renders so you can see each trolley or packing station prior to manufacture.

We can also provide interactive models which allow you to see the design from all angles.

Similarly we can also create factory or warehouse layout drawings for larger projects.

Pigeonhole Storage Trolley

Bespoke Trolleys

If you require a bespoke trolley to suit a specific product or application, we can manufacture these to suit your requirements.

We regularly develop trolley designs and prototypes for UK businesses to help solve their production or transport problems.

Please contact our sales team to discuss your bespoke trolley requirements.

Warehouse Trolleys

Spaceguard manufactures trolleys to suit any environment, from the factory to the warehouse.

Each trolley is manufactured in our East Yorkshire based factory and made to suit your exact requirements.

In addition to simple picking trolleys and warehouse trolleys, we also develop bespoke trolleys to suit very unique or difficult applications, including for electrical appliance testing processes.

Below you can see several examples of trolleys we have manufactured for our customers.
