

Bespoke Packing Benches

The addition of a well designed bespoke packing bench suited towards your specific company requirements is an ideal way to reduce packing and assembly times as well as improve quality and consistency within process.

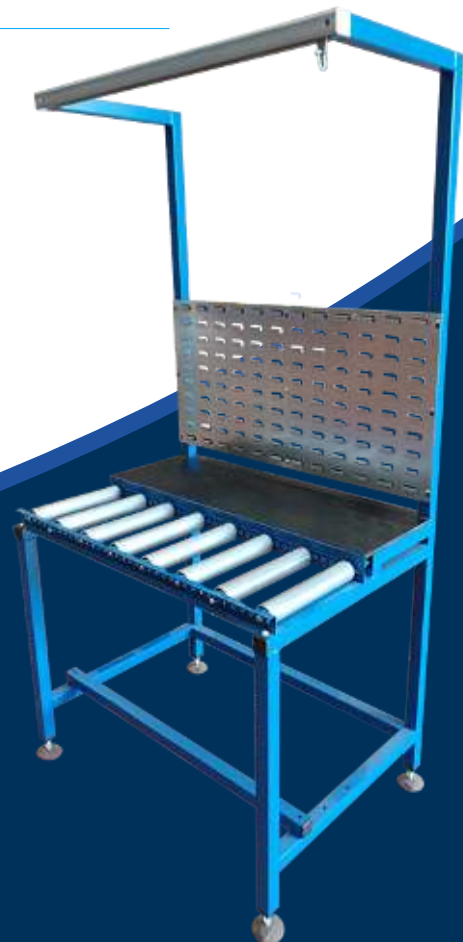

Spaceguard works closely with clients to ensure the bespoke bench or system is going to deliver savings and has the growth to be able to effectively cope during busy periods with almost limitless configurations available.

From Concept to Implementation

- For fully bespoke solutions we can work from customer sketches or factory layout plans to ensure the perfect packing solution.
- From these sketches 2D & 3D models are designed to show the client how the final product may look. These can be modified if required such as changing size/colours or adding accessories.
- Once all changes have been made and the client is happy, 3D renders can be produced which are then signed off before going into production

Bench Configuration

- Mild Steel frame construction available in all RAL colours
- Fully welded and ready for immediate use
- Any lengths, widths or heights to suit
- Fully bespoke shelving, storage or divider configurations
- A range of different worktop finishes available
- Louvre Panels and Tool racks
- Electrical accessories including lighting, electrical sockets or data points
- IT equipment such as monitor brackets, PC mounting and keyboard trays
- Integration of other automation equipment such as ball tables and roller conveyors
