

Carton Live Storage Racking

Mini Roller carton storage is ideal for packing areas, allowing the picker to spend up to 85% of their time doing productive work.

Working on a first in first out basis the rack is loaded from one side and unloaded from the other, there is also the option to load and unload from the same side.

These racks cost a little more than conventional shelving however returns are made from reducing all picking and packing times .

Mini Roller Track

Versatile lengths of roller track which are most commonly used within live storage or flow rack systems which are perfect for a range of industries, suitable for moving small boxes/totes or containers.
