

## Gravity Roller Conveyors

Gravity Roller Conveyors are typically used within warehouse/factory environments and are used to convey items which flat surfaces such as cardboard boxes or plastic crates/totes.

These conveyors rely on gravity to transport goods (hence the name). Using free spinning rollers products can either be pushed by hand or when positioned at a slight decline they can move on their own reducing worker load and increasing overall efficiency.

### Features

- Conveyor lengths and widths to suit any application
- Support stands available at any height, further adjustment of approximately 100mm available using the provided feet.
- Suitable to convey most items weighing grams through to several tons

### Roller Configurations

- Roller diameters from 20mm through to 102mm
- Lengths to suit your application
- Free running bearings
- Wide range of tube and spindle options
- PVC, Mild Steel & Stainless Steel rollers available

### System Components

- Straight Modules
- Roller Bends
- Lift up gate sections
- Sideguides & End Stops

From small one off conveyors to full gravity roller conveyor systems we can provide products at a realistic price, on a quick turnaround, delivered to your site and ready for immediate use.
