

## Lean Packing Workstations

Spaceguard Lean packing workstations are ergonomically designed to suit your specific process requirements. This can be with additional options including weigh scales, IT equipment along with data integration, automation equipment to reduce manual handling. Spaceguard has a long history for working closely with the customer to ensure the equipment manufactured and supplied is Ergonomic for the operator, robust, reliable and brings real time savings to the business, whilst reducing manual handling.

## Lean Packing Workstations

Weighscales are often a key component within distribution and packing warehouses allowing accurate measurement of packages or components for shipping calculations. This information can also be fed back into your warehouse system by RS232 or USB connection.

## Spaceguard Manual Call system (Andon Systems)

The Implementation of manual call systems (Andon products) are used within production and packaging processes to eliminate time waste & down time within process. This creates real value, cost savings and increasing productivity along with improving overall flexibility.

Spaceguard manual call systems can be bench or pole mounted. they can also be easily added to an existing workbench.
